

ROOT CANAL TREATMENT (Post op Instructions)

- There may be some soreness of the tooth being treated for a few days after treatment.
- Warm saline (1/2 teaspoon of salt in a glass of warm water) rinses are helpful in the healing process.
- A tooth undergoing RCT is brittle & weak. Avoid chewing hard food on that tooth till such time as the treatment is complete with capping.
- In case of excessive pain or discomfort, or if swelling should occur, please contact us.
- It is advisable to have a crown fitted on the tooth where the RCT has been performed, after the treatment has been completed.
- Please do not forget to take the medicines prescribed to you by your dentist.
- Following completion of the RCT & Crown, please visit us for a check-up once every three months.
